#### Definition of Weighted Average Maturity (1) & (2)

(1) This weighted average maturity calculation uses the SEC Rule 2a-7 definition for stated maturity for any floating rate instrument held in the portfolio to determine the weighted average maturity for the pool. This Rule specifies that a variable rate instrument to be paid in 397 calendar days or less shall be deemed to have a maturity equal to the period remaining until the next readjustment of the interest rate.

(2) This weighted average maturity calculation uses the final maturity of any floating rate instruments held in the portfolio to calculate the weighted average maturity for the pool.

# **Economic Commentary**

Risk assets experienced a strong start to the year as global stock markets reached multi-year highs. The S&P 500 Index rose above 1500 for first time since 2007. Markets were lifted by the ability of the U.S. Congress to avert the full brunt of the "fiscal cliff", continued accommodative central bank policy globally, a stronger than expected earnings season in the U.S., some positive news in Europe and a reacceleration of growth in China. The 'risk-on' sentiment continued in January after U.S. lawmakers struggled to pass a compromise that prevented the full brunt of tax hikes and spending cuts scheduled to take place at the beginning of 2013. While they also averted a debt ceiling crisis, the stage is set for a contentious debate as Congress put off the more important decisions regarding spending cuts via sequestration and the debt ceiling until March and May respectively. Toward the end of the month, U.S. equity markets benefited from a strong earnings season. With approximately 60% of the S&P 500 having reported, 69% beat analysts' earnings estimates. While the European sovereign debt crisis is far from over, the ECB's announcement, that €137 billion of its long term refinancing operations (LTRO) will be repaid by banks, lifted markets. This was viewed as good news as 278 banks repaid approximately 30% lent under the first round of the LTRO, significantly higher than expected.

Economic data released in January were mixed. Labor market measurements reflected a steady but slow recovery and housing data slowed in December after three strong months. While the advance report of U.S. fourth quarter 2012 GDP shrunk by -0.1%, this was primarily due to a large contraction in government spending, specifically federal national defense spending, which fell by -22.2% in anticipation of the Budget Control Act of 2011 taking effect in 2013. The forecast for U.S. growth remains lackluster in the first half of 2013. Cuts in government spending should continue to detract directly from growth and fiscal uncertainty may also dampen corporations' willingness to make capital expenditures. The Federal Reserve should continue to purchase \$85 billion per month in Treasury and mortgage-backed securities well through 2013 as inflation remains below their target. Labor markets are likely to experience tepid growth as businesses worry about the potentially messy negotiations in Washington over deficit reduction. This information is an excerpt from an economic report dated January 2013 provided to TexSTAR by JP Morgan Asset Management, Inc., the Investment manager of the TexSTAR pool.
