- This weighted average maturity calculation uses the final maturity of any floating rate instruments held in the portfolio to calculate the weighted average maturity for the pool.

### Internet System Upgrade

Internet security is top of mind for any organization that provides internet access and continual review is necessary to keep up with the rapidly changing pace of technology. As a result of our ongoing efforts in this area, the TexSTAR website is migrating from Single Factor Authentication to SiteMinder Utility Multifactor Authentication (MFA) to enhance system security by introducing secondary authentication (security questions and device recognition) and enhancing participant access to password reset and other authenticationrelated self-service pages. When you log on to the TexSTAR internet transaction system on or after Monday, July 20th, you will be prompted to go through the process to establish your security questions. We are pleased to introduce this system upgrade as we strive to provide the highest level of services to our TexSTAR participants. Please watch your email this month for more information.

### Economic Commentary

Fixed income, equities and commodities all performed well in the second quarter. This was primarily driven by the accommodative stance of central banks, which have maintained or eased their policies in an environment of low growth, low inflation and low volatility. In the U.S., the Federal Open Market Committee (FOMC) met twice in the second quarter, and largely confirmed market expectations, reducing asset purchases by \$10 billion at each meeting to \$35 billion beginning in July. The FOMC also revised their economic and rate expectations, downgrading 2014 GDP projections after a poor first quarter, shifting their unemployment rate forecast lower and marginally raising their inflation projections. Chairwoman Janet Yellen confirmed the Fed's commitment to maintaining low rates for as long as needed to support economic growth. However, policymakers including Chairwoman Yellen, have warned investors not to become complacent about the current low volatility environment as policy renormalizes once growth improves further. Data released in the second quarter was stronger than the first quarter. Labor markets continued to show steady improvement, inflation appeared to have bottomed, and housing data rebounded after a soft six months. It is believed the Fed will provide the necessary liquidity to allow the economy to expand until it sees broader housing strength and/or material wage inflation, as it recognizes the potential risk of its first increase in the fed funds rate in over seven years. The sequencing of Fed policy normalization now appears to involve the continued reinvestment of principal and interest on its existing mortgage holdings and a more nuanced management of its lending rates, through interest on excess reserves, and its reverse repo facility.
