- (1) This weighted average maturity calculation uses the SEC Rule 2a-7 definition for stated maturity for any floating rate instrument held in the portfolio to determine the weighted average maturity for the pool. This Rule specifies that a variable rate instrument to be paid in 397 calendar days or less shall be deemed to have a maturity equal to the period remaining until the next readjustment of the interest rate.
- (2) This weighted average maturity calculation uses the final maturity of any floating rate instruments held in the portfolio to calculate the weighted average maturity for the pool.
 - * The maximum management fee authorized for the TexSTAR Cash Reserve Fund is 12 basis points. This fee may be waived in full or in part in the discretion of the TexSTAR co-administrators at any time as provided for in the TexSTAR Information Statement.

Economic Commentary

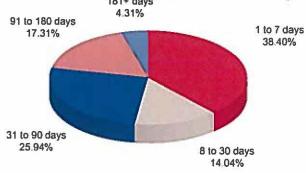

In October, volatility returned to markets in a way not seen in some time, as the five-year Treasury yield fell by -0.41% during the month and then recovered to end the month down only -0.15% at 1.61%. The S&P 500 Index quickly fell to its lowest level since April and then also recovered to end the month at 2018, its highest close for the year to date. Market participants were concerned about slowing economic growth in Europe and China, and market movements seemed to be exacerbated by limited liquidity from dealers, with regulatory constraints on their inventories. Falling commodities prices dampened inflation expectations, weakened emerging markets growth and lowered energy corporate earnings, but should be a boon to consumers. Decent corporate earnings and stronger than expected third quarter U.S. GDP growth appeared to reinvigorate U.S. markets at the end of the month. The Fed held its October meeting at the end of the month, where it finally ended asset purchases (QE3). After an expansion of its balance sheet since 2008 of over \$3.5 trillion, it looks like the Fed has come to the conclusion that the costs of further balance sheet expansion outweigh the additional benefits to the broader economy.

In the U.S., consumption is expected to increase and keep pace with the healthy labor income backdrop. Labor market slack continues to decline, and wage and price inflation should only gradually increase as the frictional levels in labor supply and demand take longer than prior history to develop. Price inflation is likely to be further restrained by global demand weakness and the strengthening U.S. dollar. Foreign central banks are actively devaluing their currencies, creating a deflationary impulse on core goods imported into the U.S. Energy prices are also declining on the stronger U.S. dollar and a supply/demand imbalance in the global marketplace. All of these forces should keep price inflation fairly muted heading into year-end. The Fed signaled a willingness to raise rates in 2015 after concluding its asset purchase program. It is believed that the Fed will remain patient and highly accommodative as it begins to normalize policy in 2015 and beyond. The global growth outlook has a greater level of uncertainty. While the current slowdown is unlikely to derail improvement in U.S. GDP, it could serve as a headwind in the future.
