### Definition of Weighted Average Maturity (1) & (2)

(1) This weighted average maturity calculation uses the SEC Rule 2a-7 definition for stated maturity for any floating rate instrument held in the portfolio to determine the weighted average maturity for the pool. This Rule specifies that a variable rate instrument to be paid in 397 calendar days or less shall be deemed to have a maturity equal to the period remaining until the next readjustment of the interest rate.

(2) This weighted average maturity calculation uses the final maturity of any floating rate instruments held in the portfolio to calculate the weighted average maturity for the pool.

# **Economic Commentary**

Market participants entered the guarter with many uncertainties but global markets rebounded as the UK Brexit referendum showed little evidence of contagion throughout the European Union, US payroll numbers bounced back averaging over 200,000 per month for the third quarter, and central banks continued to be accommodative. Growth in much of the world is stabilizing, but at below historical levels. Businesses are investing like they're in a recession: the bulk of investment has not been in physical assets, but into the deadweight costs of security and control functions. These don't drive productivity and growth (one could argue that they actually sap growth), although they may have contributed to an environment of lower volatility. Globally, disinflationary forces are in control and a sub-trend recovery remains the base case. As central bank policy loses its effectiveness, what's needed is fiscal spending. It is hard to see fiscal spending happening in a meaningful way over the coming quarters, particularly in the U.S., where the presidential election makes compromise in Washington unlikely. It's possible that we won't see meaningful fiscal policies implemented until the next recession. With global growth stabilizing at sub-trend levels and without any meaningful signs of inflation, the Fed is expected to remain extremely slow and cautious. Its members don't want to create an imbalance that would destroy the modest growth that exists. It was anticipated the Fed would to lower its future expectations, as it did on September 21 with one rate hike in December still expected. The ongoing failure by central banks to reflate the global economy and raise inflation expectations is frustrating to them as well as to most investors. As they begin to publicly second-guess the unconventional tools they have deployed, investors are left wondering what will happen to the economy and especially, to asset prices. In the absence of meaningful fiscal stimulus, ideally in combination with structural reform, the post-crisis deleveraging will have years to run and ultimately, have to be underwritten by the central banks reminding us that these unconventional tools have one unambiguous benefit: they make the debt burden sustainable.
